DETAILED ACTION

This Office Action corresponds to application 10/632,674. Claims 1-9 have been allowed.

Terminal Disclaimer

The terminal disclaimer filed on 2/28/2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent 7,096,230 (U.S. Patent Application 10/631,324) has been reviewed and is accepted. The terminal disclaimer has been recorded.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The cited prior art of reference fail to teach or fairly suggest either in combination or alone as claim 1 recites:

'processing said information retrieved from said first storage location to generate, and store in a second storage location, information on collaboration states and collaboration state transitions of said process, said collaboration states defined by a local state for each participant system and a communication status of each message exchangeable between said participant systems, said collaboration state transitions being determined by applying said local state transitions to said collaboration states' and 'generating a result data object containing information on every incompletely

Art Unit: 2167

specified terminal collaboration state found.' These limitations can be found in independent claims 8 and 9 rendering them allowable for the same reasons. Dependent claims 2-7 depend upon claim 1 and are patentably distinct over the prior art for at least the above reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Related Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent Application 2003/0097410 to Atkins et al. The subject matter disclosed therein pertains to the pending claims (i.e. asynchronous messaging).
